**Dam removal is not the answer**

Paul VanDevelder's July 11 opinion ("The salmon stalemate sheds light on global warming conflicts to come", July 11) falsely claims Columbia and Snake River "fish counts have continued to fall" and dam removal is the only way to reverse salmon's "imminent extinction".

Juvenile fish survival through the River System has tripled since the 1970s. Adult returns this decade are the highest since the 1930s. Unprecedented collaboration among federal, tribal and state fish managers, backed by many millions of dollars, will continue to rebuild fish runs.

Breaching dams would put both the environment and economy in jeopardy. It eliminates clean, reliable, renewable hydropower. It undermines the ability to integrate new wind energy. It eliminates navigation, the most fuel efficient and cleanest mode of transporting goods. And, it may do more harm than good for salmon. If it helps at all, dam breaching would do nothing for nine of the river basin's 13 ESA-listed runs.
